[1] The full manual for this model can be found at:
http://www.fujifilm.com/support/digital_cameras/manuals/pdf/index/s/finepix_s4200-s4500_manual_en.pdf

To view images:

1. Press the playback ▶ button .

2. Use the right and left arrows on the selection dial
     to cycle through images.

3. Press the shutter button to return to shooting mode.

To delete images one at a time:

1. Press playback ▶ button.

1. Use the right and left arrows on the selection dial
    to find the image that you want to delete.

2. Press the up arrow on the selection dial.

3. Press the OK button.

4. Another image will appear. If you **not** want to delete it, press the back button.

To force the flash to go off:[2]

1. If you are in playback mode, press the shutter to switch to shooting mode.

2. Press arrow on the navigation dial beside the ⚡ symbol.

3. Use the selection arrows to toggle through the options displayed on the monitor.

To prevent the flash from going off:

Put the flash down.

To make a picture lighter or darker by adjusting the exposure:

1. Set the mode dial to **P**.

2. Press the Exposure Compensation button ⊡ .

3. Use the right and left arrows on the selection dial to adjust the exposure. Results will be visible on the
    monitor.

4. Take the picture.

To switch between shooting and playback modes:

The camera has to main modes – the shooting mode and the playback mode. This is important to know
because the buttons and arrows have different functions depending on the mode.

1. To switch from shooting mode to playback mode, press the playback button ▶.

2. To switch from playback mode to shooting mode, press the shutter button.

---
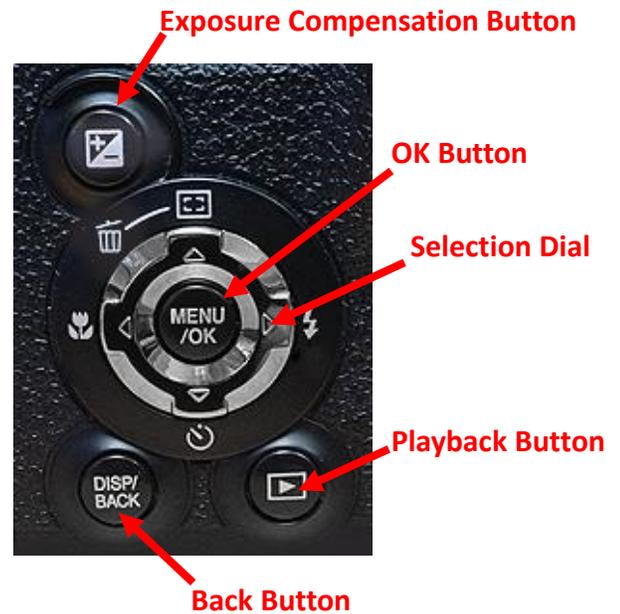

[2] The default setting for the flash is automatic, which means that the camera decides when to use the flash based on the available
light. But there may be times when you want override this default: For instance, if you are shooting a very dark subject against a
bright background, you may want to force the flash to go off in order to "fill in" the shadows; and if you are shooting a very bright
subject against a dark background, you might want to prevent the flash from going off in order to avoid overexposing the subject.
